# New functions in firmware V1.30

The following functions have been added in firmware V1.30

- Network functions (FTP, Telnet and VNC)
- REMOTE/KEYBOARD and EXTERNAL Control Lock/Unlock settings
- Take Rename function
- Rec Fn Stop Monitor function
- Monitor muting function
- Slate tone function
- USER BITS Source setting function
- Addition of take end time code display
- Ability to receive digital input signals that are in consumer format
- Clear function can be executed using the SHIFT and BACKSPACE keys on an external keyboard
- Cursor can be moved using the up and down arrow (↑/↓), HOME and END keys of an external keyboard
- Title display changes on the PROJECT screen
- PROJECT key now moves up a level when the PROJECT screen is open.

Network functions (FTP, Telnet and VNC) added

ETHERNET page added to the REMOTE SETUP screen

Use this to make settings related to Ethernet communication.

STATUS

This shows the unit's MAC Address and current IP Address.

IP MODE

Use these buttons to enable or disable Ethernet functions.

Setting buttons: Disable (default value), Enable

IP SETUP

Use to switch between DHCP and STATIC.

When set to DHCP, and there is a DHCP server on the LAN, the IP Address, Subnet Mask and Default Gateway items should be automatically acquired.

When set to STATIC, you must set the IP Address, Subnet Mask and Default Gateway items manually.

Setting buttons: DHCP, STATIC (default value)

LINK SPEED

Use these buttons to set the link speed.

Setting buttons: AUTO (default value automatically adjusts speed according to connection), 100M (operates with fixed speed of 100 Mbps.)

Password

Set the password. (See "CHANGE PASSWORD screen" below.)

IP Address/Subnet Mask/Default Gateway

These show the current values of these settings. When IP SETUP is set to STATIC, use these field to set the values. (See "IP Address/Subnet Mask/Default Gateway editing screen" below.)

Default values: 0. 0. 0. 0

Depending on the IP SETUP setting, this area appears differently as shown below.

| DHCP | STATIC | Field selected |

IP Address/Subnet Mask/Default Gateway editing screen

Touch the corresponding area of the REMOTE SETUP screen ETHERNET page to open its value setting screen.

- Each field can contain up to 3 digits. (You do not need to input "0" before values of 1–2 digits.)
- The first field is selected when a screen opens.
- After a field is selected, touching a number button will enter that digit. When touched, further digits will be added to the end of the same field.
- Touch the period (point) button to move to the next field.

Example

Screen opened		168.	1.	1	
"1234" input		168.	1.	1	(First "1" is discarded)
"." input	192.		1.	1	

CHANGE PASSWORD screen

Touch the Change button in the Password section of the REMOTE SETUP screen ETHERNET page to open the CHANGE PASSWORD screen where you can set the password.

Up to 9 characters can be used.

Network function (FTP, Telnet and VNC) details

FTP (file transfer protocol)

By using an FTP client application, you can transfer files between this unit and a computer.

Connect to this unit and login in the same way as with other FTP servers. After connecting and logging in, "A:" and "B:" will appear in the root directory. These correspond to the unit's CF1 and CF2 slots. If the corresponding slot does not contain a card, the "A:" or "B:" will appear empty.

NOTE

- *To display Japanese, use an FTP application that supports Unicode.*
- *Always set the maximum number of simultaneous transfers of the FTP client application to "1". If not set to "1" files cannot be transferred properly.*
- *For information about FTP client applications that have been confirmed to work properly with this unit, please contact TASCAM customer support.*

Required settings for connecting by FTP

The following settings are necessary for connecting to this unit by FTP.

IP address:	This unit's IP address is shown in the `IP Address` field of the `REMOTE SETUP` screen `ETHERNET` page.
Port:	21
User name:	HS-8 (cannot be changed, case sensitive)
Password:	HS-8 (default, case sensitive)
	This setting can be changed by using the `Password Change` button on the `REMOTE SETUP` screen `ETHERNET` page.

NOTE

- *The number of simultaneous connections is "1". Depending on the FTP client application, two simultaneous connections with this unit might be possible, but files might not be transferred correctly, so we recommend that you do not use two or more simultaneous FTP connections with this unit.*
- *FTP connections cannot be made when EXTERNAL Control has been set to LOCK on the `Lock Setup` screen. Likewise, setting this to LOCK will end any active FTP connection.*
- *Changing any settings on the `REMOTE SETUP` screen of the `ETHERNET` page will also end any active FTP connection.*

Working with files using an FTP client application

CAUTION

When adding, overwriting or deleting files/folders from this unit using an FTP client application, always follow the procedures below to rebuild the entire CF card that was changed.

If you do not rebuild the card, inconsistencies between the syetem files and audio files will occur, leading to problems such as the following.

- Added files and folders will not appear
- Deleted files and folders will continue to appear
- Overwritten files will not play back properly

Procedures for rebuilding the entire CF card

1. Open the project selection screen.
2. While no project is selected, press the MENU button to open a pull-up menu.
3. Press the REBUILD button in the pull-up menu.
4. When a confirmation message appears in a pop-up window, press the OK button or the DATA dial.

● **Read files from the unit**

You can read files from this unit at any time.

● **Add new files to the unit**

You can add files to this unit at any time.

When recording, if you add BWF files to the current session, they will be shown in the list with existing files, recorded files and added files in that order.

● **Overwrite existing files on the unit**

You can only overwrite the current take when the unit is stopped.
You can overwrite other existing files at any time.

However, if the `PLAY SETUP` screen `GENERAL` page `Play Mode` setting is `All Take`, during playback you might not be able to overwrite the take following the current take depending on the timing.

● **Delete a file on the unit**

The current take can be deleted only when the unit is stopped. Files other than the current take can be deleted at any time.

● **Add a new folder to this unit**

You can add a new folder to this unit at any time.

● **Delete a folder from this unit**

You can only delete the current folder when stopped.
You can delete any folder other than the current from this unit at any time.

● **Edit the names of files/folders on this unit**

You cannot edit the names of files/folders on this unit.

CAUTION

- *If overwriting causes the size, number of channels, bit-rate or sampling frequency of an audio file to be different from the previous file, inconsistencies could occur between the system files and audio files. If such an inconsistency occurs, the following error message will appear when you start playback.*

- *Do not overwrite an existing audio file with a file that uses a different sampling frequency. The inconformity that results could become unresolvable.*

Remote control by Telnet

Remote control of this unit is possible over Ethernet via port 23 using Telnet.

Necessary setting for connections by Telnet

The following settings are necessary for connecting to this unit by Telnet.

IP address:	This unit's IP address is shown in the `IP Address` field of the `REMOTE SETUP` screen `ETHERNET` page.
Port:	23
Password:	HS-8 (default, case sensitive)
	This setting can be changed by using the `Password Change` button on the `REMOTE SETUP` screen `ETHERNET` page.

Connecting to the unit by Telnet

1. After connecting with this unit by Telnet using the above IP address and port number, press the computer **Enter** key.

2. When `Enter Password` appears on the Telnet console, input the above password and press the **Enter** key.

3. When login succeeds, `Login Successful` appears on the Telnet console. Input "exit" and press the Enter key to end the Telnet connection.

NOTE

- *2 simultaneous Telnet connections are possible.*
- *Telnet connections cannot be made when `EXTERNAL Control` has been set to `LOCK` on the `Lock Setup` screen. Likewise, setting this to LOCK will end any active Telnet connections.*
- *Changing any settings on the `REMOTE SETUP` screen of the `ETHERNET` page will also end any active Telnet connection.*
- *For information about this unit's RS-232C command protocol, please contact TASCAM customer support.*

VNC (virtual network computing)

By using a VNC viewer application, you can view and operate the contents of this unit's LCD screen on a computer.

In the VNC viewer application, you can use a mouse to conduct the following operations.

- Mouse left click: Same as touching the unit's LCD.
- Mouse wheel click: Same as pressing the unit's **ENTER** key.
- Mouse wheel operation: Same as using the unit's **DATA** dial.
- Mouse wheel push and turn: Same as using the unit's **DATA** dial while pushing it to make large setting changes (COARSE mode operation).

In addition, when the VNC viewer application is active, you can conduct the following operations by using the computer keyboard.

- F1 to F12 keys: These work the same as an external keyboard connected to the unit. For details see the "List of keyboard operations" in "Operation using a computer keyboard" in "12 – Other functions" of this unit's manual.
- Home key: This works the same as this unit's **HOME** key and opens the Home Screen.

  Press the End key while pressing and holding the Home key to open the LOCK SETUP screen.
- End key: This works the same as this unit's **MENU** key and opens the MENU screen.

  Press the End key while pressing and holding the Home key to open the LOCK SETUP screen.
- Page Down: This works the same as this unit's **PROJECT** key and opens the PROJECT screen.
- Cursor 1 key: This works the same as turning this unit's **DATA** dial right.
- Cursor z key: This works the same as turning this unit's **DATA** dial left.
- Character input keys: Use to input characters when a keyboard screen appears on the unit.

Necessary setting for VNC connections

The following settings are necessary for connecting to this unit using a VNC viewer application.

IP address: This unit's IP address is shown in the IP Address field of the REMOTE SETUP screen ETHERNET page.

Password: HS-8 (default, case sensitive)

This setting can be changed by using the Password Change button on the REMOTE SETUP screen ETHERNET page.

NOTE
- *2 or more simultaneous VNC connections are not possible.*
- *When EXTERNAL Control has been set to LOCK on the Lock Setup screen, display is possible but operation is not when using a VNC viewer application.*
- *Changing any settings on the REMOTE SETUP screen of the ETHERNET page will also end any active VNC connection.*
- *For information about VNC viewer application that have been confirmed to work properly with this unit, please contact TASCAM customer support.*
- *When files are being transferred by FTP or when the system sampling frequency is 88.2 or 96 kHz, VNC viewer application display and operation will not be smooth.*

## REMOTE/KEYBOARD and EXTERNAL Control Lock/Unlock settings added

REMOTE/KEYBOARD and EXTERNAL Control Lock/Unlock settings have been added on the LOCK SETUP screen.

- When REMOTE/KEYBOARD is set to LOCK, if a remote control or keyboard connected to a remote connector is used, the following pop-up message appears when remote/keyboard control is locked.

- When EXTERNAL CONTROL is set to LOCK, if an operation is conducted using RS–232C, RS–422, PARALLEL or ETHERNET, the following pop-up message appears when external input is locked.

Take Rename function

A function has been added that allows you to change the names of takes. Follow the procedures below to do so.

1. On a take selection screen, select that take that you want to rename.

2. Touch the MENU button on the take selection screen to open a pull-up menu (An EDIT NAME button, which is shown framed in red below, has been added to this pull-up menu).

3. Touch the EDIT NAME button in the pull-up menu to open the TAKE NAME screen. (On this TAKE NAME screen, you can change the input take name.)

NOTE
When multiple takes are selected, you cannot use the EDIT NAME button in the pull-up menu.

4. Edit the take name.

5. Touch the Enter button on the TAKE NAME screen or press the **DATA** dial to confirm the changed take name and return to the take selection screen.
Rec Fn Stop Monitor function added

A Rec Fn Stop Monitor function has been added to the PREFERENCES page of the SYSTEM SETUP screen. This function allows you to disable input monitoring of channels that are armed for recording when the unit is stopped.

Monitor muting function added

A RecPause Monitor function that allows input monitoring when recording to be muted has been added to the PREFERENCES page of the SYSTEM SETUP screen

Slate tone function added

A Slate Tone function has been added to the OUTPUT page of the MIXER SETUP screen. This can be used to output a 1kHz sine wave at the reference level on the channels that are armed for recording.

NOTE

When the "LR 2mix" record function is on, the sine wave will be input on all channels along with the monitoring signals.
USER BITS Source setting function added

A USER BITS Source function that allows the type of timecode user bits recorded and output to be set has been added to the I/O page of the SYNC T/C screen.

Addition of take end time code display

End time code information (END T/C) has been added to the take information pop-up.

Receiving digital input signals that are in consumer format

The unit can now receive digital input signals that are in consumer format.

Clear function can now be executed using the SHIFT and BACKSPACE keys on an external keyboard

A function has been added when a character or number input screen is open that allows you to clear all the characters/numbers by pressing the BACKSPACE key while pressing and holding the SHIFT key on an external keyboard. (Previously, on a number input screen, pressing the Esc key cleared input numbers, but this has been changed.)

Cursor can now be moved using the up and down arrow (↑/↓), HOME and END keys of an external keyboard

A function has been added that allows you to press the ↑/↓ key on an external keyboard to move the cursor to the beginning/end of a line of characters when a character input screen is open.

Title display changes on the PROJECT screen

The PROJECT screen title display now switches to PROJECT, FOLDER or TAKE according to which list is displayed.

PROJECT key now moves up a level when the PROJECT screen is open

Now, if the **PROJECT** key is pressed while the PROJECT screen is open, the contents of the folder one level above the items shown currently will be displayed.

New pop-up message

Message	Details and responses	Remarks
Cannot Edit read-only file.	This file has been set as read-only and cannot be edited.	
Cannot set Mark point in read-only file.	Marks cannot be added to a file that has been set as read-only	
--- Circle Take --- Did not Edit N Take(s) that (is/are) read-only.	Editing a number (N) of takes that are set to read-only was not possible.	N = number of takes This appears when "CIRCLE TAKE" is executed for takes that are set to read-only or not yet set.

Addendum to the Owner's Manual

Importing multiple mono files that have been recorded with another device as a single take

Follow the procedures below to import multiple mono files that have been recorded with another device to this unit as a single take.

1. Name the mono files that you want to be recognized as a single take using the following format.

    [mono take name]_[2-digit track number].wav

    Example:
    Scene001-T001_01.wav
    Scene001-T001_02.wav
    Scene001-T001_03.wav
    Scene001-T001_04.wav
    Scene001-T001_05.wav
    Scene001-T001_06.wav
    Scene001-T001_07.wav
    Scene001-T001_08.wav

2. Copy the above files to the CF card by following the procedures in the "Preparations before importing" section of "Importing files recorded by other devices" on page 4 of the HS-8 firmware v1.20 Instruction Manual.

3. Rebuild the folder by following the procedures in the "Preparing imported files for use with this unit (rebuilding the folder)" section of "Importing files recorded by other devices" on page 4 of the HS-8 firmware v1.20 Instruction Manual.

NOTE

the unit to treat as a single take have the same sampling frequency, bit depth and audio length.
