GA-100CD Guitar Amp with CD Phrase Trainer

From the people who brought you the versatile CD-GT1 MkII—the company that's been making pro audio gear for guitarists for over 30 years—comes the GA-100CD.

A new concept in guitar combos, the GA-100CD is a 100-watt guitar amplifier with a built-in CD Trainer. Now you can learn those guitar licks, play along with the CD as your backing track, and amplify the results.

Whether you're a singer/songwriter, playing in a band, or a weekend warrior, this amp's got the tone to drive it home. Tascam's Neo Tube™ technology makes the GA-100CD sound like a tube amp, using a new solid state FET circuit that does what digital modeling was supposed to do: make you sound amazing! And its built-in effects—including delay, chorus, phase, flanger, tremolo and vibrato plus reverb—can be applied to make you sound even better.

The GA-100CD is a combo that defines a whole new way to play guitar.

Overall features

- ▶ 60-watt RMS guitar amplifier section
- ▶ Separate 20+20-watt stereo amplifier for CD playback
- ▶ 12-inch custom-voiced RockReady speaker for amplifier section
- ▶ Two 5-inch fullrange speakers for stereo playback of CD Trainer
